# BUSINESS SALES ANALYTICS PROJECT

-BY ABHISHTA

**Internship Project:**

**Tools used:**

- Power BI
- Microsoft Excel

**Dataset Used:** Superstore Sales Dataset

MAY 2026

# Project Overview:

This project analyses Superstore sales data to understand business performance across different categories, regions, and customer segments. Using Power BI and Microsoft Excel, an interactive dashboard was created to identify sales trends, profitable areas, and customer behaviour. The goal of this project is to convert raw sales data into meaningful insights that can help businesses make better decisions and improve growth.

# Objectives:

- Analyse overall sales and profit performance
- Identify top-performing products and categories
- Understand sales trends over time
- Compare regional and customer segment performance
- Generate business insights and recommendations using data visualization

# Tools Used:

- Power BI – for creating interactive dashboards and visualizations
- Microsoft Excel – for data cleaning and preparation
- Superstore Sales Dataset – used for sales and business analysis

# Dataset Description:

The Superstore Sales Dataset contains information about customer orders, sales, profit, products, regions, and shipping details from a retail business. This data was used to study sales performance, understand customer trends, and identify important business insights using visual analysis.

Sum of Sales

# Business Insights:

1. California generated the highest sales among all states, showing strong business performance in that region.

2. The Consumer segment contributed the highest share of total sales compared to other customer segments.

3. Office Supplies was the top-performing category with consistently high sales.

4. Phones emerged as the highest-selling sub-category, indicating strong demand for technology products.

5. Sales increased significantly toward the end of the year, showing higher customer demand during festive and holiday seasons.

# Recommendations:

1. The business can focus more on regions like California where sales are already performing well to increase growth further.

2. Keeping enough stock for popular products such as Phones and Office Supplies can help avoid shortages and improve customer satisfaction.

3. Special offers and loyalty programs for regular customers may help increase repeat purchases and customer engagement.

4. In regions with lower profit, the business can work on improving pricing strategies and reducing unnecessary costs.

5. Since sales increase during the end of the year, planning early for inventory and promotions can help maximize seasonal sales.

# Conclusion:

This project analysed Superstore sales data to understand sales performance, customer trends, and profitable areas. Using Power BI, the data was converted into an interactive dashboard that provided meaningful business insights and supported better decision-making.
